

### **3 Band Pultec Test Results**

The 3 band Pultec PCB incorporates a passive hi and lo boost/cut EQ similar to that of the Pultec EQP1A and a mid cut EQ similar to that of the Pultec MEQ5. In addition it also allows low Q mid boost at the mid cut frequencies.

The high boost can be implemented either as an inductor based circuit like the original EQP1A or as a low cost RC only type.

The low cut/boost frequencies are 20, 30, 60, 100, 150 and 200Hz.

The hi cut/boost frequencies are 3K, 4K, 5K, 8K, 10K and 16KHz

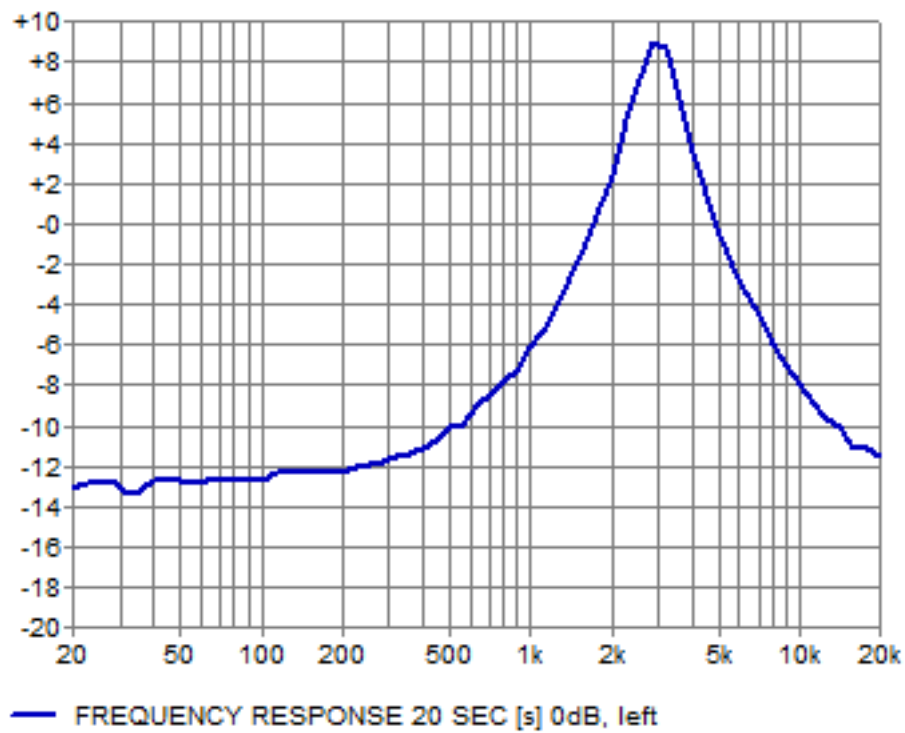

The mid cut/boost frequencies are 200, 300, 500, 700, 1K, 1K5, 2K, 3K, 4K, 5K and 7KHz.

The graphical results of testing the first prototype are given on the following pages. All the tests were carried out using a Lindos MS10 Audio Test Set which was connected to a PC running the Lindos Lin4Win software.

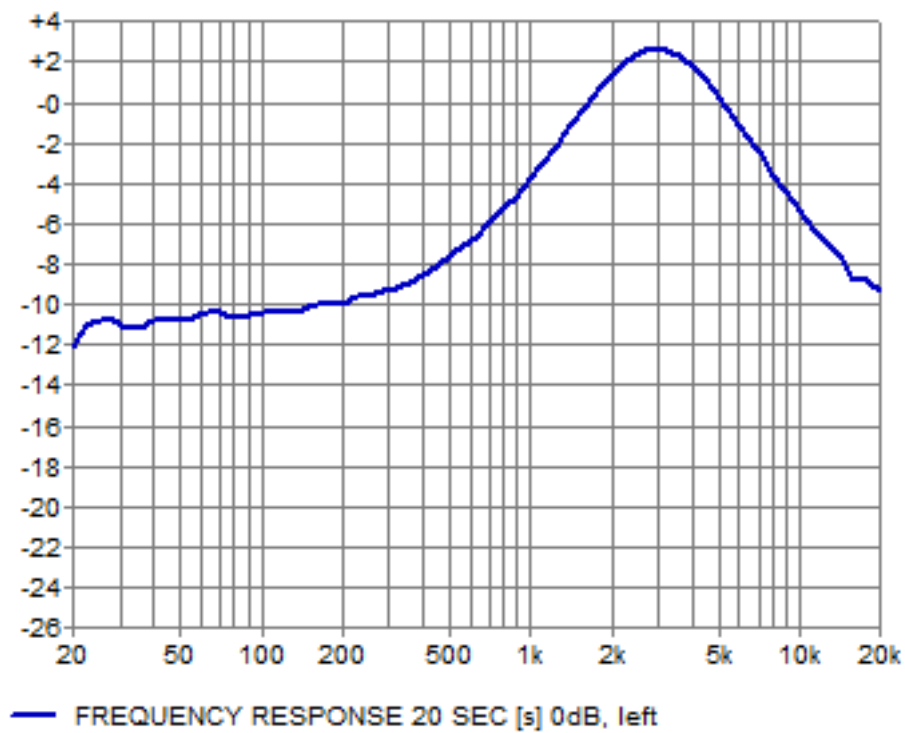

For these tests the high boost was implemented using an inductor.

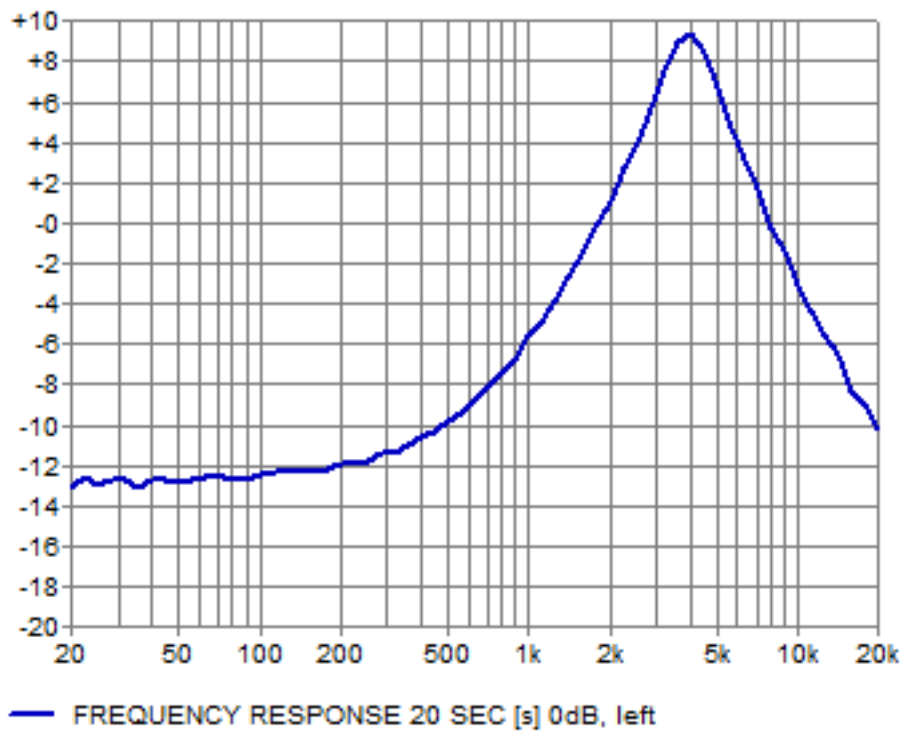

Ian Thompson-Bell 2nd June 2012.

## High Boost

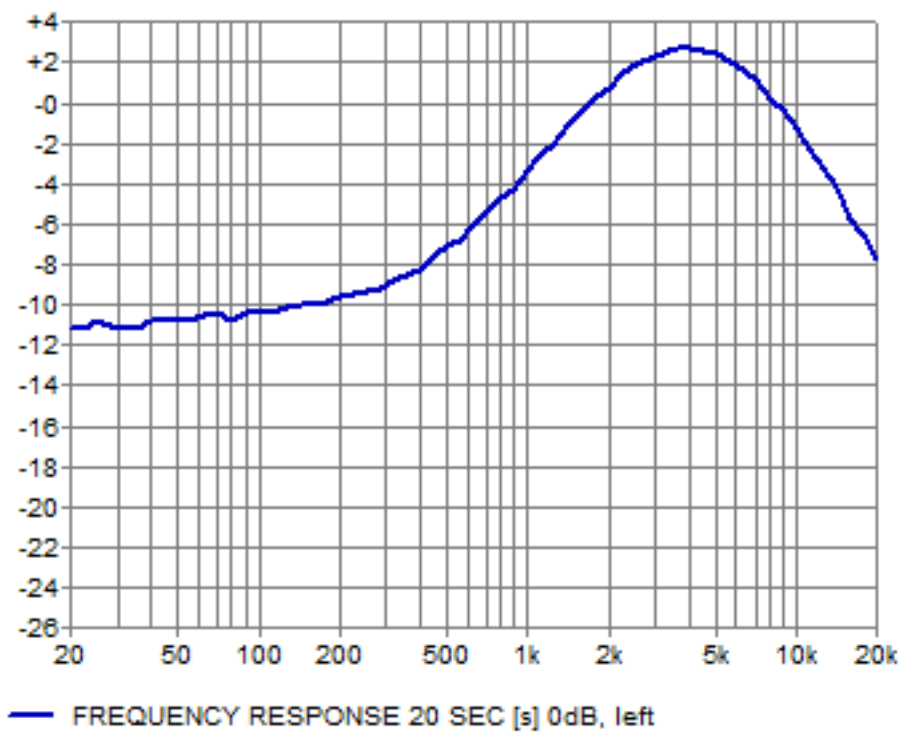

*3Khz High Q*

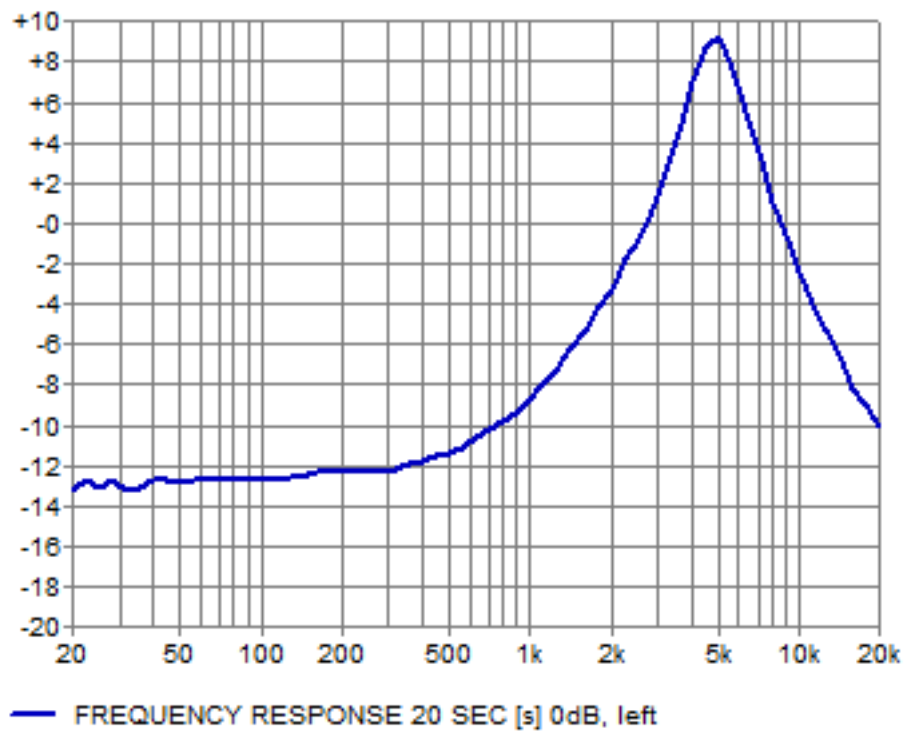

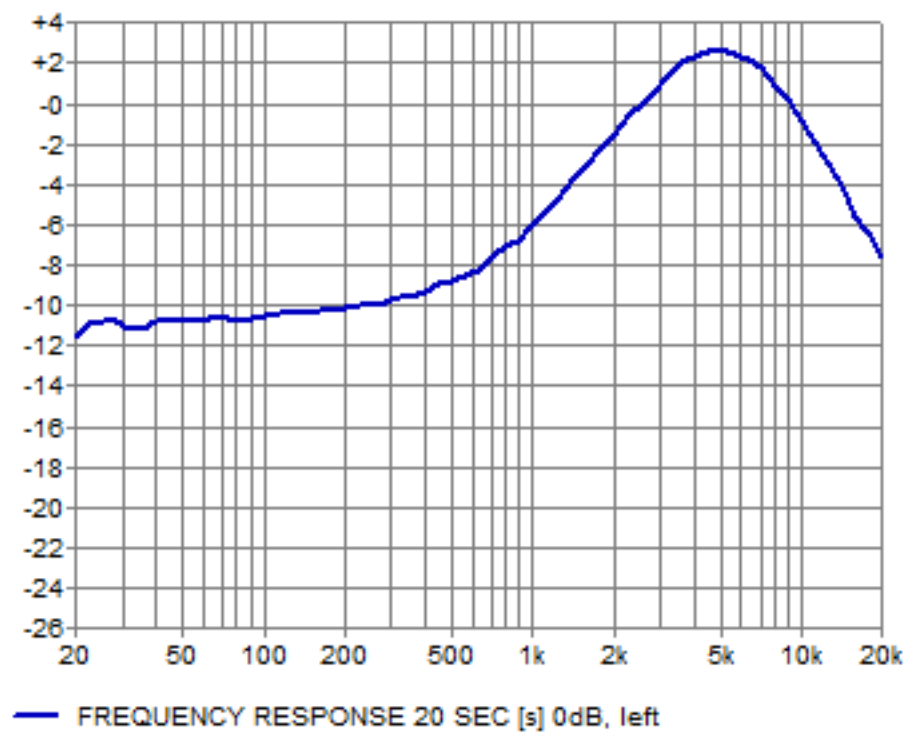

4KHz High  $Q$

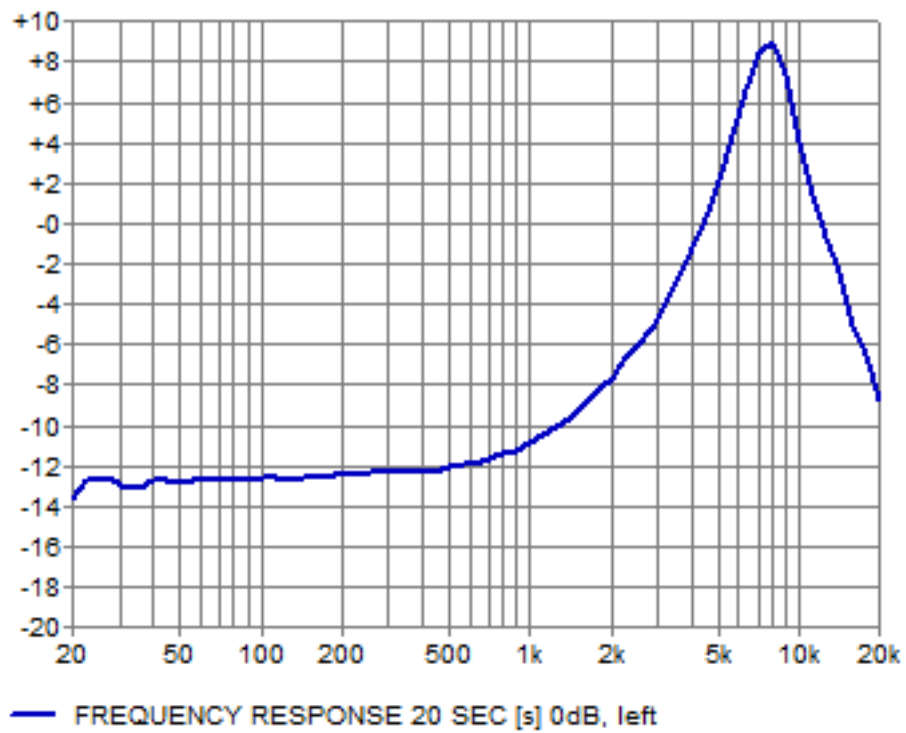

4KHz Low  $Q$

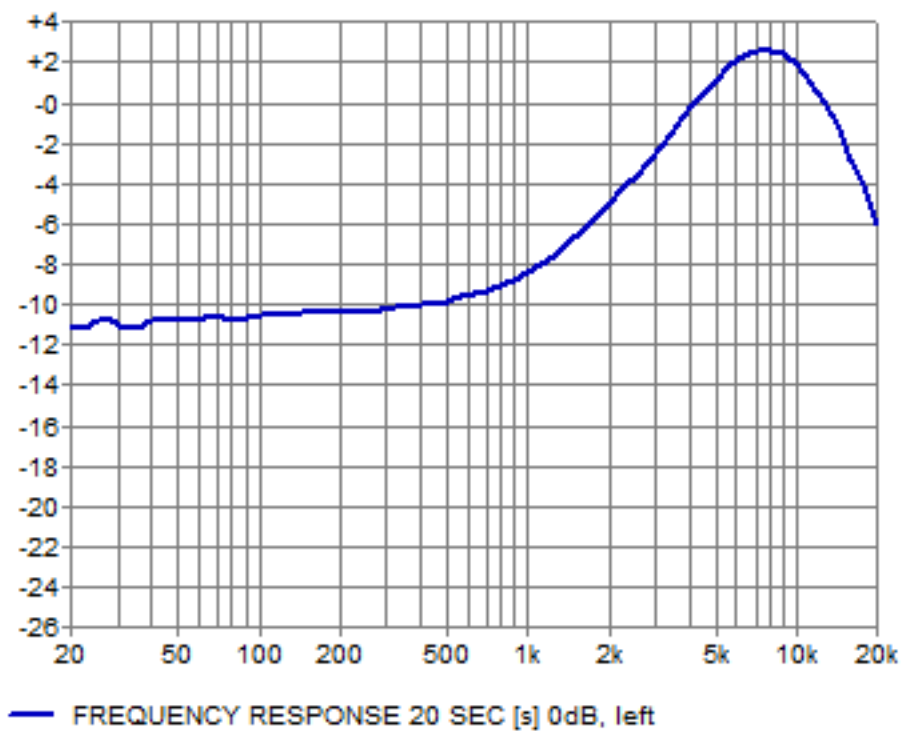

5KHz High  $Q$

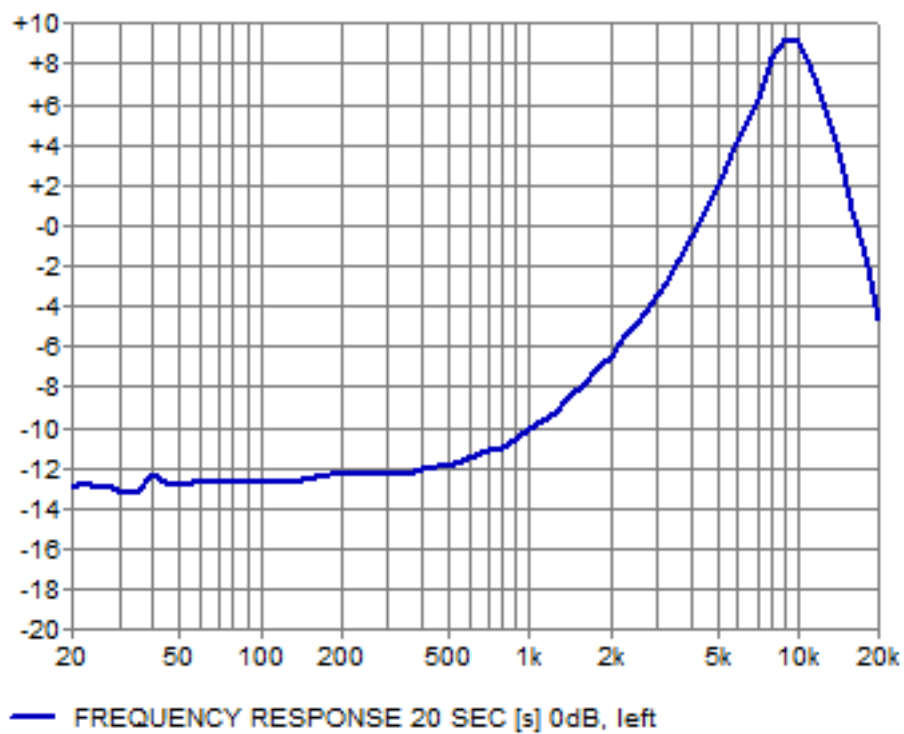

5KHz Low  $Q$

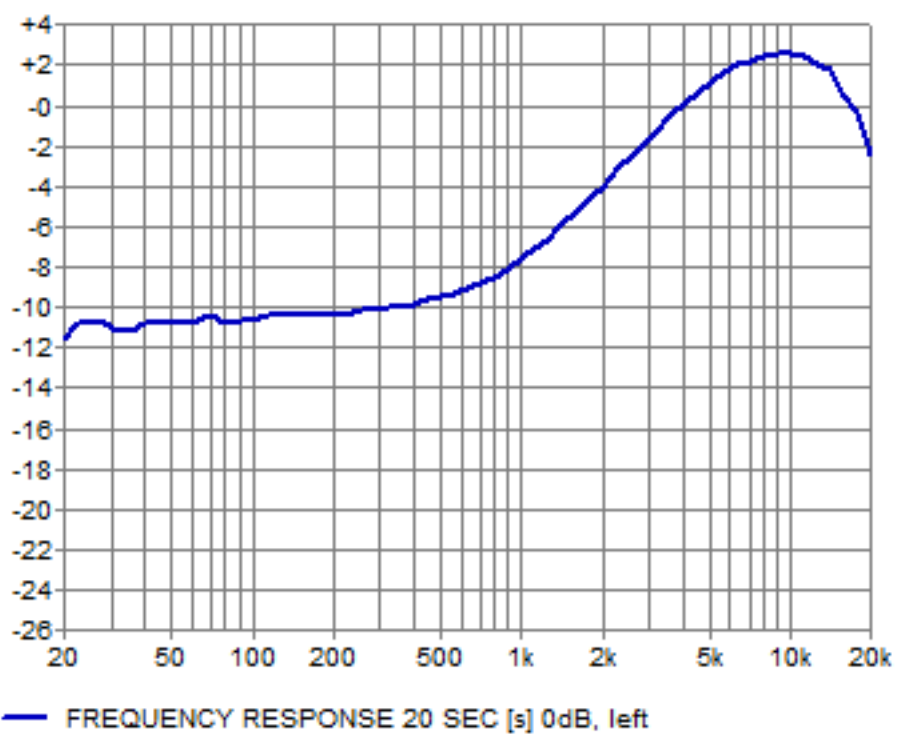

8KHz High  $Q$

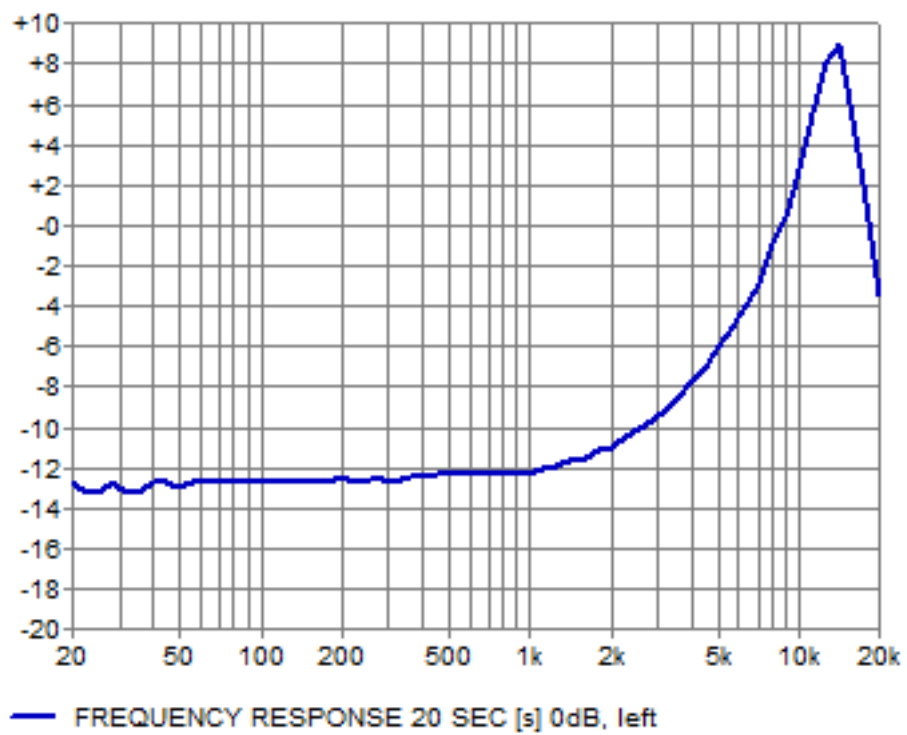

8KHz Low  $Q$

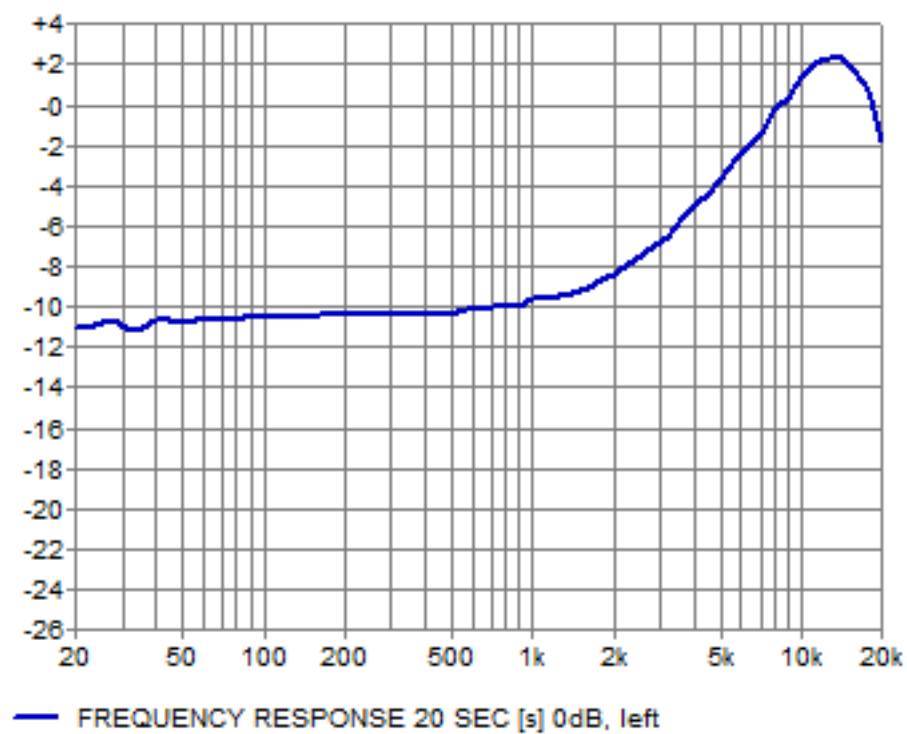

10KHz High  $Q$

10KHz Low  $Q$

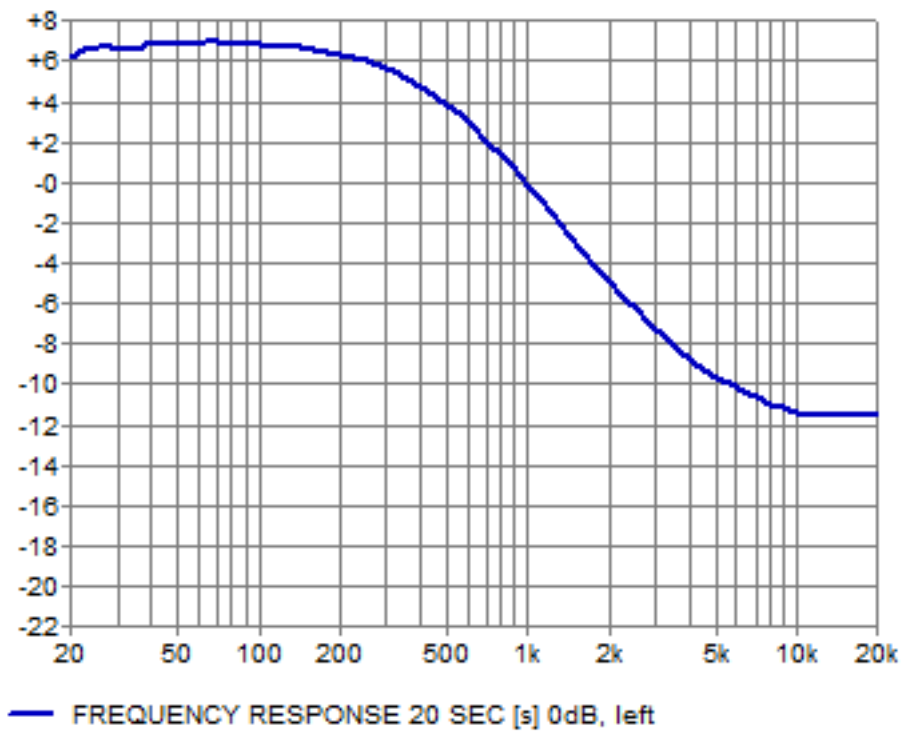

*16KHz High  $Q$*
